Full Stack Java Developer

Professional Summary:

A Full Stack Java Developer boasting more than four years of experience in the design, development, and deployment of scalable web applications with high performance. Proficient in programming languages including **Java, JavaScript, and SQL**, with a deep understanding of **Spring Framework, Hibernate, Spring Boot, and JPA** for developing resilient back-end systems. Skilled in Java design patterns such as **MVC, DAO, Singleton, and Factory** to ensure maintainable code. Proficient in front-end technologies such as **HTML5, CSS3, Bootstrap, and ReactJS**, facilitating seamless and responsive user interfaces. Skilled in managing **MySQL** and **Oracle databases**, as well as employing **JUnit** and **Mockito** for dependable testing. Proficiency in integrating and testing **RESTful web services** using tools such as **Postman**, as well as deploying applications on **Apache Tomcat servers**. Proficient in using **Maven** for build automation and **GitHub** for version control. Adept in **Agile** methodologies, employing **Scrum** and **Test-Driven Development** for incremental enhancements. Recognized for effective teamwork and strategic choices that guarantee seamless project implementation and increased productivity.

Technical Skills:

Programming Languages: Java, JavaScript, TypeScript, SQL, Python, C++

Frameworks: Spring Framework, MVC, Hibernate, Spring Boot, JPA, ReactJS

Java Technologies: Spring, Hibernate, Java Beans

Web Technologies: HTML5, CSS3, Bootstrap, Angular

Cloud Services: Azure (DevOps, Service Bus, API, Deployment, Security), AWS (SNS, Docker)

Version Control and CI/CD Tools: GitHub, SVN, Azure DevOps

Web Services and API Tools: REST APIs, Postman

Testing Frameworks and Tools: xUnit, Postman, Unit Testing, Integration Testing

Database: SQL Server, MySQL, MongoDB, Redis, Oracle

Development and IDE Tools: Visual Studio, Visual Studio Code, Eclipse IDE, IntelliJ,

Methodologies: Agile, Scrum, Test-Driven Development

Professional Experience:

United States Postal Service
Wilkes- Barre, Pennsylvania

Jun 2023 - Present

Computer Systems Analyst/Programmer

Project: I developed and enhanced user interfaces for the USPS Admin Portal as well as the SuperAdmin Functional Interface. To guarantee smooth operations, I took charge of the backend and frontend development. My contributions to the USPS Admin Portal included improving the process of creating postage labels by addressing issues and adding new features. The purpose of this optimization was to make workflows for internal USPS users more efficient. At the same time, I developed and implemented the SuperAdmin Interface, which required integrating frontend elements with backend logic. This interface provided enhanced features for user management and administrative controls. Throughout the project, I focused on improving system functionality, ensuring effective and robust data management, and maintaining a user-friendly interface—thereby fostering operational efficiency and increased user engagement.

Responsibilities

- Developed and maintained scalable backend applications using Java to meet evolving corporate requirements, ensuring high availability, security, and performance.
- Worked alongside business analysts and cross-functional IT teams to convert intricate software requirements into actionable designs, utilizing Agile methodologies for iterative development.
- Employed coding practices that align with industry standards, as well as object-oriented programming, to ensure code that is efficient, maintainable, and extensible.
- Created dynamic front-end components with TypeScript, HTML5, CSS3, and Bootstrap to ensure a responsive UI/UX design and smooth interaction with backend services.
- Utilized both NoSQL (Redis) and relational databases (Oracle), enhancing query performance and maintaining data integrity across systems, while managing connections via JPA for database interactions in Spring Boot applications.
- Working with Docker, configure the project to containerization, run multiple images in docker.
- Use design patterns to write efficient and clean code.
- Debug and run unit tests to ensure software reliability.
- Tasked with the deployment and upkeep of applications within AWS as well as establishing CI/CD pipelines for automated deployment and oversight.
- Stay up to date on Java programming trends and implement them.
- Worked in close partnership with IT specialists on software integrations, focusing on RESTful APIs and microservices architecture to guarantee smooth data transfer between applications and platforms.
- Conducted thorough API testing and validation using Postman, ensuring integration reliability and adherence to functional requirements.
- Involved in code reviews to actively promote compliance with clean code principles, uphold coding standards, and enhance code quality through collaborative feedback.
- Produced dynamic reports using diverse generation tools and languages, supporting comprehensive data insights.
- Worked effectively in Agile development environments, adapting to changing priorities and maintaining strong communication with stakeholders to align solutions with business goals.

Environments: Java, Typescript, Spring Framework, HTML5, React.js, Next.js, Git BASH, Postman API, Jenkins, Visual Studio, Swagger, Github, RESTful WebServices, AWS, Docker.

SS&C Technology
Manhattan, NYC

Jun 2022 – July 2023

Intern Developer

Project: I developed and improved an online platform designed to assist healthcare professionals in efficient data management and querying. As a Full-Stack Developer, I enhanced both the frontend and backend of the platform with Java, guaranteeing smooth integration and uniformity between the user interface and backend services. I improved data retrieval features based on user input by optimizing SQL queries for faster and more accurate results, enhancing overall performance through Database Interaction. The homepage was revamped according to UI/UX principles, providing an intuitive interface designed for medical professionals' needs. By employing proven strategies for data validation and sanitization, I made certain that user inputs and outputs were secure. This reduced the risk of vulnerabilities like SQL injection attacks and improved the platform's overall reliability and security.

Responsibilities

- Engaged in Agile sprints by working on designated user stories and performing research spikes to investigate new solutions and technologies.
- Created frontend and backend components, guaranteeing a smooth connection between user interface and Java-based backend services through RESTful APIs and microservices architecture.
- Enhanced SQL queries and established database interactions to boost data retrieval performance, ensuring rapid and efficient querying with minimal delay.
- Executed data validation and sanitization methods, leading to a decrease in security threats such as SQL injection attacks, while bolstering the overall security of the platform and the integrity of its data.
- Redesigned the homepage and incorporated UI/UX best practices, improving user engagement among medical professionals through a responsive and intuitive interface.
- Developed and executed REST APIs that interacted with microservices to ensure interoperability and smooth integration within distributed systems.
- Developed JSON configurations to facilitate dynamic UI rendering, improving flexibility and adaptability for future features.
- Created extensive technical documentation to facilitate a seamless transition and transfer of knowledge to other developers and teams.
- Utilized GitHub for managing source code, which ensured version control, enabled collaborative development, and facilitated efficient branching strategies.
- Carried out thorough unit tests and debugging with the help of Eclipse and Jira to guarantee that the code was stable and of good quality prior to deployment.

Environments: Oracle SQL Developer, MySQL, Spring Framework, Legacy, Java Development, Javascript, Jira, Object-Oriented Programming (OOP), Eclipse, GitHub, Eclipse

NYC Department of Buildings (DOB)

280 Broadway, NYC

Jan 2022 - Jun 2022

System Production Support Intern

Project: Created and executed a data management solution for tracking and organizing system performance metrics at the NYC Department of Buildings (DOB). Employed Excel, Python, and SQL for sophisticated data analysis, processing, and reporting. Developed Python scripts for automating data cleaning, transformation, and visualization tasks. SQL queries were used to extract and manipulate data from the database, thereby optimizing reporting processes. Incorporated Power BI dashboards for dynamic data visualization and Power Automate to create seamless workflow automation among different data sources, thus enhancing operational efficiency.

Responsibilities:

- Worked together with developers and business analysts to grasp and release new features and data requirements.

- Established a connection with customers from both technical and non-technical backgrounds, drawing out specifics of issues and delivering straightforward solutions.
- Helped develop training resources and documentation for customers, guaranteeing effective communication of system capabilities.
- Utilized Python for data automation, employing libraries such as Pandas, NumPy, and Matplotlib for sophisticated data manipulation and visualization.
- Authored and fine-tuned SQL queries for data extraction, guaranteeing effective insight retrieval from extensive datasets and enhancing report production.
- Utilized Excel for data analysis, incorporating pivot tables, VLOOKUP, macros, and advanced formulas to improve data precision and automate reporting processes.
- Developed and upheld Power BI dashboards, offering stakeholders actionable insights and visual representations of data trends
- Employed Power Automate to enhance efficiency by automating tasks and merging workflows across various data sources and platforms.
- Dedicated to the integrity, validation, and cleanliness of data, guaranteeing datasets for reporting and decision-making that are accurate and reliable.

Environments: Excel, Python (Pandas, NumPy, Matplotlib), SQL, Microsoft Power BI, Power Automate, Microsoft Office Suite.

Herbert H Lehman College (CUNY)
Bronx, NYC

Aug 2021 - Jan 2022

Support Tech Team member
Responsibilities:

- Helped faculty incorporate Hy-Flex learning to ensure smooth interaction between in-person and remote students.
- Offered technical assistance for classroom technologies, guaranteeing the seamless functioning of audio/video systems, microphones, and cameras prior to and following classes.
- Assisted teachers in diagnosing and fixing hardware and software problems, guaranteeing that class activities were disrupted as little as possible.
- Helped educators identify and resolve hardware and software issues, ensuring minimal disruption to classroom activities.
- Worked with the IT department to guarantee that the most recent software updates and security patches were implemented on classroom technology and learning platforms
- Facilitated user-friendly engagement by helping faculty embrace new technologies and promoting best practices in virtual learning environments.

Environments: Zoom, Microsoft Teams, Google Classroom, Interactive Whiteboards, Smartboards.

Education:

Colorado State University, Colorado
Master of Science in AI & Machine Learning

July 2024 - Jun 2026

CUNY Lehman College, New York
Bachelors of Science in Computer Science

Aug 2019 - May 2024

Bronx Collaborative High School, New York
10th – 12th Grade,

Aug 2016 – Jun 2019
